## OBJECTIVE

I'm a web developer, specializing in creating user-centric websites with technical proficiency. Guided by principles of teamwork and user satisfaction, it helps me contribute positively to projects.

---

## SKILLS

**Frontend:** Bootstrap, React JS, Tailwind, Java Script.

**Backend:** MongoDB, Express JS, Node JS.

**Tools:** Git, Firebase, VS Code, React Router, Figma, PSD

---

## PROJECTS

**Elijah Blogs:** Elijah Blogs is a free web-based platform for users to post and read blogs. It allows users to create wish lists, comment, and share their favorite blogs effortlessly.

**Features:** Users can share blogs on social media, Users can search blogs by blog title, Only blog owners can update their blog

**Technologies:** React, Firebase, Tailwind, Loading-skeleton, React Photo View, ExpressJS, MongoDB

**Links :** [Live-Site](#) [Front-end-code](#) [Back-end-code](#)

**Atom Camp:** Simplifies medical camp bookings and accommodates diverse user roles – participants, health-care professionals, organizers, and admins.

**Features:** Role based action, User's can chat with help center, JWT and Firebase authentication

**Technologies:** React, Flowbite React, Axios, Tanstack Query, formik, yup, JWT, ExpressJS

**Links :** [Live-Site](#) [Front-end-code](#) [Back-end-code](#)

**Loveme:** Loveme is my front end focused project. Basically it's a Wedding management website with user authentication using firebase and react. where user can select their favorite and suitable packages for their dream wedding.

**Features:** User authentication with email password and also with google, without login user can't access other routes or pages, after a successful login user image will be shown in the header.

**Technologies:** React, Firebase, Tailwind, Raw CSS
